Marca(s) de (los) producto(s) médico(s): GLOBUS MEDICAL

Clase de Riesgo: III

Indicación/es autorizada/s: Los implantes del sistema de estabilización CREO® son dispositivos de fijación espinal no cervical pensados para la fijación de tornillos pediculares con abordaje posterior (T1-S2/ilion), fijación de ganchos posterior (T1-L5), o bien fijación lateral-anterior (T8-L5). La fijación de tornillos pediculares está indicada en pacientes de esqueleto maduro (incluidos los de estatura baja) y en pacientes pediátricos (solo CREO® 4.75). Estos dispositivos se han creado como complemento para la fusión en las siguientes indicaciones: discopatía degenerativa (definida como dolor de espalda discógeno o degeneración discal confirmada mediante historial y estudios radiográficos)), espondilolistesis (incluida la espondilolistesis grave [grados 3 y 4] de las vértebras L5-S1), traumatismo (es decir, fractura o dislocación), deformidades o curvaturas (escoliosis, cifosis y/o lordosis, enfermedad de Scheuermann), tumor, estenosis y fusión previa fallida (pseudoartrosis). Cuando se utiliza como complemento de la fusión, el sistema de estabilización CREO® está pensado para su uso con autoinjerto y/o aloinjerto.

Además, el sistema de estabilización CREO® está pensado para el tratamiento de espondilolistesis grave (grados 3 y 4) de las vértebras L5-S1 en pacientes de esqueleto maduro que reciban fusión por injerto de hueso autógeno, con implantes fijados a la región lumbar-sacro o ilion con extracción de implantes tras la consecución de una fusión sólida. Los niveles de fijación de tornillos pediculares en este tipo de pacientes son L3-sacro/ilion.

Los tornillos CREO® incluyen perforaciones en el extremo distal para la inyección de cemento óseo, tinte radiopaco o solución salina. Dichas perforaciones también pueden causar un crecimiento óseo en el tornillo. La inyección de cemento óseo mejora la fijación del tornillo en huesos débiles o afectados de osteoporosis. Los tintes radiopacos y las soluciones salinas pueden emplearse como ayuda en la colocación del tornillo, para no dañar la pared pedicular. Cuando se utilizan para la fijación posterior de tornillos pediculares no cervicales en pacientes pediátricos, los implantes del sistema de estabilización CREO® 4.75 están indicados como complemento de la fusión para el tratamiento de escoliosis idiopática en adolescentes. El sistema de estabilización CREO® 4.75 está pensado para su empleo con autoinjertos y/o aloinjertos. La fijación de tornillos pediculares pediátrica está restringida a patologías posteriores.

Para obtener niveles de fijación adicionales en pacientes de esqueleto maduro, las barras del sistema de estabilización CREO® pueden conectarse al sistema de estabilización REVERE® (barra de 5,5mm o de 6,35mm), al sistema de estabilización REVERE® 4.5 (barra de 4,5mm) o al sistema espinal occipito-cervicodorsal ELLIPSE® (barra de 3,5mm) mediante los conectores correspondientes. Para obtener niveles de fijación adicionales en pacientes pediátricos, las barras del sistema de estabilización CREO® pueden conectarse al sistema de estabilización REVERE® 4.5 mediante los conectores correspondientes. Consulte en el embalaje del sistema REVERE®, REVERE® 4.5 o ELLIPSE® las instrucciones e indicaciones de uso.
